

Can Healthy Ecosystems Prevent Future Pandemics?

TUESDAY 14 JULY 2020
11AM - 12PM

The degradation of our natural environment and changing behaviours have increased the risk of disease “spillover” from animals to humans. Integrating the themes of global health (humans and animal), ecosystem resilience, biodiversity conservation, and food security, this online event will bring experts together to share their perspectives on how the risk of future pandemics can be reduced through a better understanding of the complex interactions between health and natural systems.

PANEL

Dr Shailaja Fennell (*Land Economy*)

Professor Kate Jones (*Professor of Ecology & Biodiversity, UCL*)

Dr Rosalind Parkes-Ratanshi (*Institute of Public Health*)

Professor James Wood (*Veterinary Medicine*)

Chaired by Professor Bhaskar Vira (*Geography*)
